EDUCATION

Purdue University

Master of Science in Computer and Information Technology (4.0/4.0)

West Lafayette, IN

January 2024 – December 2025

Indian Institute of Technology (IIT) Indore

Bachelor's in Technology (BTech) (8.77/10.0)

July 2018 – May 2022

EXPERIENCE

Amazon

Seattle, WA

Software Development Engineer – Stores Foundational AI / AWS Bedrock

February 2026 – Present

- Developed core capabilities for Falconer, a **multi-tenant AI-agent platform** with 22 Agent/Tool/Prompt APIs, enabling versioned agent/tool invocation, Bedrock **AgentCore/MCP** integration, and VPC-isolated runtimes for secure execution.
- Delivered capabilities for **post-training agentic evaluation (Garuda platform)**, powering answer generation, dataset ingestion, judge configuration, and 100+ daily evaluation workflows through **ECS-hosted AI agents**.
- Engineered **control-plane services** for Anthropic Claude model family deployments on AWS Bedrock, managing replica lifecycle, distributed capacity orchestration, and secure cross-organization monitoring via **Kinesis, Lambda, and CloudWatch**.

Software Development Intern – AWS Bedrock

May 2025 – August 2025

- Developed Hubble, a centralized service for managing **Anthropic Claude LLM deployments** on AWS Bedrock, integrating with **Trainium-based** infrastructure and 15+ RESTful APIs to reduce manual intervention by 90%.
- Optimized inference operations by reducing throttling and integrating API-based capacity management with automated rebalance planning, reducing issue-resolution time by 50%.

Razorpay (South Asia's Largest Payment Gateway)

Bengaluru, India

Software Development Engineer, Backend

July 2022 – December 2023

- Led re-architecture of Harvester, a real-time Spark service used by 5+ teams, **saving \$10–11k/month**.
- Migrated SRM dashboard from TiDB to Pinot, reducing lag from 5 to 1 min for 5+ teams & clients.
- Coded custom whitelisting logic for **Maxwell and Debezium CDC collectors**, securing 90% of company data.
- Integrated Schema Registry into entity onboarding flows and **ETL** pipelines by implementing necessary transformation logic and handling horizontal and vertical scaling of pods, resulting in better versioning and 100% faster retrieval of schemas.
- Improved on-call bot's data flow, adding features for real-time updates, achieving 40% faster resolution.

Jaguar Land Rover

Bengaluru, India

Software Development Intern

June 2021 – July 2021

- Designed and coded a Machine Learning Pipeline to extract critical information from handwritten sentences using standard NLP libraries like **Stanford-openie & Textacy**, achieving 70% improvement over previous algorithms.
- Made exponential smoothing and **LSTM-RNN models**, boosting failure prediction accuracy from 80% to >90%.
- Wrote a model to quantify optically scanned data using string-matching algorithms like Levenshtein-Damerau and Jaro-Winkler, achieving desired results with 95% accuracy.

RESEARCH & PROJECTS

ML Systems and Infrastructure Research

West Lafayette, IN

Purdue University – Graduate Research Assistant

January 2024 – December 2025

- Designed a predictive ML resource metamodel to estimate **CPU, GPU, memory, and training time** requirements, reducing infrastructure costs by 25% and enabling data-driven capacity planning.
- Proposed and implemented CORE-ML (resource allocation algorithm) and DeepScale (Kubernetes VPA-based autoscaling), reducing CPU over-provisioning by up to 80% & compute costs by 60%; published at **IEEE ANTS 2025 & ICC 2026**.
- Built and maintained 15+ production-grade data pipelines and a scalable **NSF-funded Advancing Cybersecurity initiative** web platform, processing thousands of daily records and delivering analytics to 20+ stakeholders.

Detection of Suicidal Ideation through Deep Learning

March 2023 – October 2023

Research Project - IIT Indore

- Developed a model using **BERT, Graph Sage, Hierarchical Attention, & DNN** to classify texts.
- Enhanced model by integrating lexicons & emotional analysis, achieving a final F1 score of 0.975.

Open-Source Contributions

January 2021 – December 2023

- Programmed a Go authentication module for **Trino** gateway, enhancing security & access control for 2000+ users.
- Integrated credential authentication into Query Book's UI, benefiting 10000+ users.
- Built a LookML to Cube.js converter at Razorpay's hackathon, reducing resource consumption by 70%, winning bounty.

TECHNICAL SKILLS

Languages: Python, Golang, C++, Java, Scala, SQL, JavaScript/TypeScript, Rust, R

Cloud & Infrastructure: AWS, GCP, Kubernetes, Docker, Kafka, CI/CD, MLFlow, Kubeflow, Terraform, Databricks

Data & ML Technologies: Spark, Airflow, PyTorch, TensorFlow, MongoDB, Redis, MySQL, PostgreSQL, DynamoDB

Awards: Head Chess Club IITI, Exceptional Work Award for HMS Upgrade, Inter-IIT Sports Meet
